

CS 4300: Artificial Intelligence

Assignment: Project Presentation

Prepare slides for a 4-5 minute presentation. Present your project and its results using these slides during the randomly assigned class period, beginning on the due date. Think of this as an oral report to your classmates on your project. You should practice your presentation to be sure that it fits into the required time limitation.

Possible Outline for the Presentation

- Introduce PEAS assessment of your project.
- Describe the agent you have built for the environment.
- Describe the variety of problem instances.
- Show the results of the agent's performance.
- Discuss possible changes and improvements that could be made to the project.

DO NOT GO ON-AND-ON ABOUT WHAT DIDN'T WORK, or WHAT YOU WERE GOING TO DO.

Required Submissions

- A PDF with your slides, via Canvas.
- Any additional code or code updates, via your git repository.
- Presentation during class.

Passoff

Upload your PDF to the Canvas assignment. Push your code to the cloud. Present during class.
