

IT 4100: File Systems

AWS EFS

Due according to date on Canvas

Assignment

In the end, you need to have 2 EC2 instances that are serving web content from a SINGLE EFS (the same) share. You can follow the instructions for one instance on [this](#) page. Just follow the instructions for creating a single EC2 instance serving files, but do it twice (once on each EC2 instance).

You should be able to demonstrate when you load the 2 different ec2 instances that you can view the same html page.

Submission and Passoff

In person, or screenshot the following:

- the 2 different urls showing the same content
- the output of the `mount` command on each machine
