

# CS 4600: Senior Project

## Portfolio

### Assignment

Update your LinkedIn profile and GitHub repositories.

#### *LinkedIn Profile*

The profile must be updated with the following current information:

1. A current photo of you
2. Technical employment history (if any)
3. College-level education history, with anticipated graduation date
4. Technical skills and knowledge areas
5. A list of 8-12 academic/personal/professional portfolio projects, each with a title and 1-2 sentence summary
6. At least 4 of these projects must include a direct link to a public repository (see below)

A hosted, personal website may be substituted in place of a LinkedIn profile. If used, the site must contain the same information listed above.

#### *GitHub Repositories*

You must have at least 4 public project repositories, each with the following content:

1. Must be public
2. Code files from the project that are reasonably organized and accessible
3. A README.md document for the repository that contains a title, at least 1-2 paragraphs/sections summarizing the project, and at least one screenshot of the project (if the project includes a user interface or display of any kind—either text or graphical)

Any hosted repository site may be used. The repositories must meet the above criteria.

### Grading

The profile and repositories will be verified to meet the above criteria. Remember the real purpose here is to give you a public facing image for use in job search, now and in the future.

### Submission

Submit a direct link to the published LinkedIn profile or hosted personal website, which then contains links to the GitHub repositories.
