CS/SE 3010: Android Application Development

Spring 2022 Syllabus

Course Description

For students pursuing degrees in Computer Science, or other students interested in writing applications for modern smartphones and tablets running the Android operating system.

Prerequisites

CS 2420 (grade C- or higher) and CS 3005 (grade C- or higher)

Course fees

Course fee: $20, used to assist in maintaining computing infrastructure.

Disability/Accessibility Resources

Utah Tech welcomes all students and strives to make the learning experience accessible. If you are a student with a medical, psychological, or learning disability that may require accommodations for this course, you are encouraged to contact the Disability Resource Center (DRC) as soon as possible. You may request reasonable accommodations at any time during the semester; however, they are not retroactive. The DRC is located next door to the Testing Center in the North Plaza Building. 435.652.7516, drc@utahtech.edu, drcenter.utahtech.edu.

Title IX Statement

Utah Tech University affirms its commitment to the promotion of fairness and equity in all aspects of the educational institution. Harassment and discrimination—including sex/gender discrimination, gender identity, gender expression, sexual harassment, sexual misconduct, gender-based violence, dating violence, domestic violence, stalking, pregnancy or parental, family or marital status and/or retaliation—not only disrupts our commitment to maintaining an environment in which every member of the University community is treated with respect and dignity, but may also violate University policy and federal, state, and/or local law.

Should you or someone you know experience behavior that is coercive, discriminatory, harassing, and/or sexually violent in nature, or if you or someone you know has questions about their rights and options regarding such behavior, you are encouraged to contact: Hazel Sainsbury, Dir. of Equity Compliance, Title IX Coordinator: 435.652.7747 (ext. 7747), Hazel.Sainsbury@utahtech.edu, TitleIX@utahtech.edu.

Incidents may also be reported directly to law enforcement, either separately or in conjunction with any report made to the University’s Title IX Coordinator, and the University will aid in making contact if requested. Utah Tech University Police: 435.275.4300 or by calling 9-1-1.

Maintaining a safe and inclusive University community is a shared responsibility. For more information on how Title IX protections can benefit you and help us keep a productive campus environment, visit titleix.utahtech.edu to learn more.

Sections

One section:

1. TR at 10:30 am–11:45 am in Smith 108
   CRN: 20655 (CS 3010)
   CRN: 22940 (SE 3010)

   Final exam: Thurs, May 5 at 9:00 am–10:50 am

Instructor

Instructor: DJ Holt
Email: djholt@dixie.edu

Office hours: see here

Objectives

At the successful conclusion of this course, students will be able to:

1. Use the Android SDK and related tools to develop modern applications for phones and tablets.
2. Design and implement a functional graphical user interface suitable for a mobile application.
3. Implement the software architectural and design patterns necessary to develop sophisticated mobile applications.

Resources

Texts

There is one required text for this course, available from the campus bookstore or online:

ISBN: 978-0135245125

Computers

You are encouraged to bring a laptop to class every day with a working and sufficiently charged battery. Your laptop must run Windows 10 (with Windows Subsystem for Linux), macOS, or Linux, and should be connected to the university WiFi network. Chromebooks, iPads, and other tablets are NOT acceptable unless they run one of the three listed operating systems. A computer that meets these requirements will be necessary to complete required coursework.

A limited number of laptops are available for students to check out for class in the event that your laptop is unavailable or you are unable to acquire a suitable machine. These laptops are only available during scheduled class time, and are not available to use at any other time. You should only rely on this option as a last resort.

Outside of class, you may use the computers in the Smith computer lab. There will also be lab assistants in this lab. Keep in mind that not all lab assistants will be qualified to assist with this course.

The computers provided within the Smith lab facilities have all necessary software installed and configured as required for the course. Personal computers will require several software components to be correctly installed and configured. While this may not be covered in class, students may request individual help from the instructor.

Canvas

This course is managed through [Canvas](https://canvas). You are responsible for announcements, dates and deadlines, grades, and other resources posted to the Canvas course.

Course Website

This course has an accompanying website. You are responsible for staying apprised of updates to the website, including assignment materials and related resources.

Assignments and Exams

Reading

The student is responsible for reading the material in the textbook. The student is expected to read the material before the class in which it is discussed. The book also includes material beyond what we will discuss in lecture, which you are encouraged to study on your own. Feel free to bring questions from the reading to lectures or to office hours.

In addition, students will be expected to find and reference online documentation and examples to assist with the completion of assignments. Additional reading resources can be recommended upon request.
Assignments

A series of programming projects will be assigned throughout the course. Assignments are due at 11:59pm on the date specified in Canvas. See below for the course late work policy.

Exams

A comprehensive final exam will be given at the end of the semester.

Grading

The final exam will count for 33% of your point total. Assignments will count for the remaining 67% of your point total.

Letter grades are assigned based on the percentage of possible points attained, according to the following chart:

<table>
<thead>
<tr>
<th>Minimum Percentage</th>
<th>Letter Grade</th>
<th>Minimum Percentage</th>

Course Policies

COVID-19 Pandemic

All students are strongly encouraged to become vaccinated against the COVID-19 virus. COVID-19 vaccines are safe and effective. You are encouraged to read the current guidance from the CDC on COVID-19 so that you can make informed decisions about your health and well-being, and learn more about how your actions and inactions affect the health of others. The health and well-being of our entire campus community is the personal and mutual responsibility of every person on campus. To increase the health and safety of those in the classroom, all students are strongly encouraged to wear an effective facial mask when in close proximity to others, especially when not yet fully vaccinated.

Special accomodations will not be given to unvaccinated or unmasked students for absenses or missed deadlines resulting from sickness or hospitalization caused by in-class transmission of COVID-19. It is each student’s responsibility to take every preventative measure against infection from the COVID-19 virus, including immediate vaccination and the wearing of an effective facial mask. In the event of an absence due to sickness, it is your responsibility to access class notes from a classmate, submit each assignment by its original deadline, and communicate with the instructor in advance of a missed quiz or exam. Remote attendance will not be offered for class lectures or exams. Assignments completed in class cannot be submitted following the class. The standard course late work policy will apply.

Attendance

Students are responsible for material covered and announcements made in class. School-related absences may be made up only if prior arrangements are made. The class schedule is approximate and the instructor reserves the right to modify the schedule according to class needs; changes will be announced in class. Exams, quizzes, and other in-class assignments cannot be made up unless prior arrangements are made. In-class quizzes and assignments may or may not be announced in advance.

Occasional absences are acceptable as long as the student maintains current progress on assignments; however, students who miss more than two consecutive weeks of class or who miss more than 20% of scheduled classes during the semester without making prior arrangements will receive a failing grade. Students who miss any scheduled exam or fail to complete a final project without making prior arrangements will receive a failing grade.

This course can only be completed by attending classes and completing all assigned work to a satisfactory level. There is no procedure for testing out of the class.

Time Commitment

Courses should require about 45 hours of work per credit hour of class. This class will require about 135 hours of work on the part of the student to achieve a passing grade, which is approximately 9 hours per
week. If you do not have the time to spend on this course, you should probably rethink your schedule.

**Late Work Policy**

Assignments are due on the date specified in Canvas, for full credit. Assignments may be submitted not more than seven (7) calendar days beyond the specified due date, including weekends and holidays, subject to a penalty determined by the degree of lateness compounded by late work submitted earlier in the semester (i.e. each late submission will result in progressively more severe late work penalties thereafter). Assignments will not be accepted after this period of time (except under exceptional circumstances decided by the instructor, if prior arrangements are made with the instructor). No late work will be accepted after the last day of class, with absolutely no exceptions. Exams cannot be made up, unless arrangements are made with the instructor prior to the date of the exam. Any assignments that are completed during class cannot be made up and late submissions will not be accepted.

**Collaboration**

Limited collaboration with other students in the course is permitted. Students may seek help learning concepts and developing programming skills from whatever sources they have available, and are encouraged to do so. Collaboration on assignments, however, must be confined to course instructors, lab assistants, and other students in the course. Students are free to discuss strategies for solving programming assignments with each other, but this must not extend to the level of programming code. Each student must code his/her own solution to each assignment. See the section on cheating.

**Cheating**

Cheating will not be tolerated, and will result in a failing grade for the students involved as well as possible disciplinary action from the college. Cheating includes, but is not limited to, turning in homework assignments that are not the student’s own work. It is okay to seek help from others and from reference materials, but only if you learn the material. As a general rule, if you cannot delete your assignment, start over, and re-create it successfully without further help, then your homework is not considered your own work.

You are encouraged to work in groups while studying for tests, discussing class lectures, discussing algorithms for homework solutions, and helping each other identify errors in your homework solutions. If you are unsure if collaboration is appropriate, contact the instructor. Also, note exactly what you did. If your actions are determined to be inappropriate, the response will be much more favorable if you are honest and complete in your disclosure.

Where collaboration is permitted, each student must still create and type in his/her own solution. Any kind of copying and pasting is *not* okay. If you need help understanding concepts, get it from the instructor or fellow classmates, but never copy another’s code or written work, either electronically or visually. The line between collaborating and cheating is generally one of language: talking about solutions in English or other natural languages is usually okay, while discussions that take place in programming languages are usually not okay. It is a good idea to wait at least 30 minutes after any discussion to start your independent write-up. This will help you commit what you have learned to long-term memory as well as help to avoid crossing the line to cheating.

**University Resources**

Additional academic resources for students provided by the University can be found at academics.utahtech.edu.

The official academic calendar with important dates and deadlines can be found at: calendar.utahtech.edu.
